

FEKO WORKSHOP

**FEKO - Comprehensive EM solutions
with modern field computation software**

**Thursday, 15th January 2009, 08:45 to 12:00
During EMC Zurich Symposium, ETH Zürich**

About FEKO:

FEKO is a leading CEM code for the analysis of any types of antennas, antenna placement on electrically small and large structures, electromagnetic compatibility, microstrip circuits and antennas in stratified media and dielectric bodies, automotive applications, etc.

Content of the presentation:

- ◇ Introduction to EM simulation
- ◇ Overview about the different numerical methods implemented in FEKO and their advantages
- ◇ Various examples from different industry sectors and application areas to illustrate the use of numerical simulation tools in practice
